Build Your Consumer App on *the World's Fastest* Blockchain

What is Solana?

Solana is the high-performance network powering internet capital markets, payments, and applications. Fast. Decentralized. Scalable.

Think of it as invisible infrastructure that powers your project's backend. Like how Stripe handles payments or AWS handles servers, Solana handles secure transactions, digital ownership, and value transfer.

Your users will benefit from reduced costs, higher rewards, and lightning fast transactions while all direct crypto interaction remains optional.

Your Success Is Our Mission — No Strings Attached

Backed by the Solana Foundation, Superteam USA exists to support ambitious founders. We don't ask for equity, fees, or anything in return. We're here simply to help you build something extraordinary.

Fundraising Support

Warm intros to top-tier Venture Capital firms and guidance on positioning your raise — including perfecting your pitch, building investor-ready decks, and fine-tuning your relevant data.

Product Development

Technical architecture reviews and best practices from experienced builders.

User Acquisition

Growth strategies and access to Solana's 15M+ active wallet ecosystem.

Hiring

Tap into our network of world-class developers, designers, and operators.

Technical Guidance

From integration to launch, our Rangers help you ship faster.

Why Solana as Your Backend?

What can blockchain technology unlock for your product:

Instant Global Payments

Send money anywhere in the world in under a second for less than a penny. No banking hours, no wire fees, no 3-5 business days.

Programmable Loyalty & Rewards

Create points, rewards, or credits that users actually own and can trade. Turn your loyalty program into a competitive moat.

True Digital Ownership

Let users own their in-app purchases, collectibles, or achievements. Items that work across apps and retain real value.

Transparent & Trustless

Every transaction is verifiable. Build trust with users who can see exactly what's happening with their data and assets.

The Solana Advantage

Speed — Sub-second confirmations mean real-time user experiences

Scale — Built to handle millions of users without compromising performance

Cost — Transactions cost fractions of a penny, so you can pass savings to users as rewards

Institutional Backing — Google Cloud, Lyft, and Visa are already building on Solana

Our Team: The Superteam Rangers

Your dedicated support squad of industry veterans who've built and scaled in crypto. Our Rangers come from tier-1 crypto VCs, DeFi protocols processing billions in volume, and global payment platforms. They volunteer their expertise because they believe in what you're building.

Ideal *for* Consumer App Founders

You don't need blockchain experience. If you're building for consumers — whether in fintech, gaming, social, or commerce — Solana's infrastructure can give you a competitive edge.

Helium — Decentralized wireless network with 1M+ hotspots, using Solana for device payments and data credits

GolfN — A consumer golf platform converting real-world play into scalable data and commerce using Solana as invisible infrastructure

Hivemapper — Dashcam network building a Google Maps competitor, rewarding drivers with tokens for mapping roads

We'll help you understand where blockchain fits and handle the technical complexity.
